

EVALUATION TEST OF QUANTUM DOTS IN HEAT TRANSFER APPLICATIONS:

GSFC · 2015

Authors: **Husain Al Hashimi**
 Jungho Kim

Institution: **University of Maryland,**
 College Park

Introduction

- Nano-size semiconductors
 - Tunable light emission spectrum, via particle size
 - High pixel and sensitivity resolution
 - Intensity and spectral characterization of Temperature

Variation of quantum dot light emission with particle size
(Courtesy of [1])

Intensity and spectral characteristics with temperature
(Courtesy of [2])

Optical Characterization

(Courtesy of [1,3-4])

Characterization of Quantum Dots

- Quantum dot fluorescence aging test
- Temperature characterization and repeatability
- Effect of quantum dot concentration and LED intensity variation

Low LED Intensity		Intermediate LED Intensity		High LED Intensity	
Low QD concentration	High QD concentration	Low QD concentration	High QD concentration	Low QD concentration	High QD concentration
T ₁	T ₁	T ₁	T ₁	T ₁	T ₁
T ₂	T ₂	T ₂	T ₂	T ₂	T ₂
T ₃	T ₃	T ₃	T ₃	T ₃	T ₃
T ₄	T ₄	T ₄	T ₄	T ₄	T ₄
T ₅	T ₅	T ₅	T ₅	T ₅	T ₅

Test Apparatus

Aging Test

Temperature Characterization and Repeatability

**99k and 70k are the exposure time of the camera
in μ s**

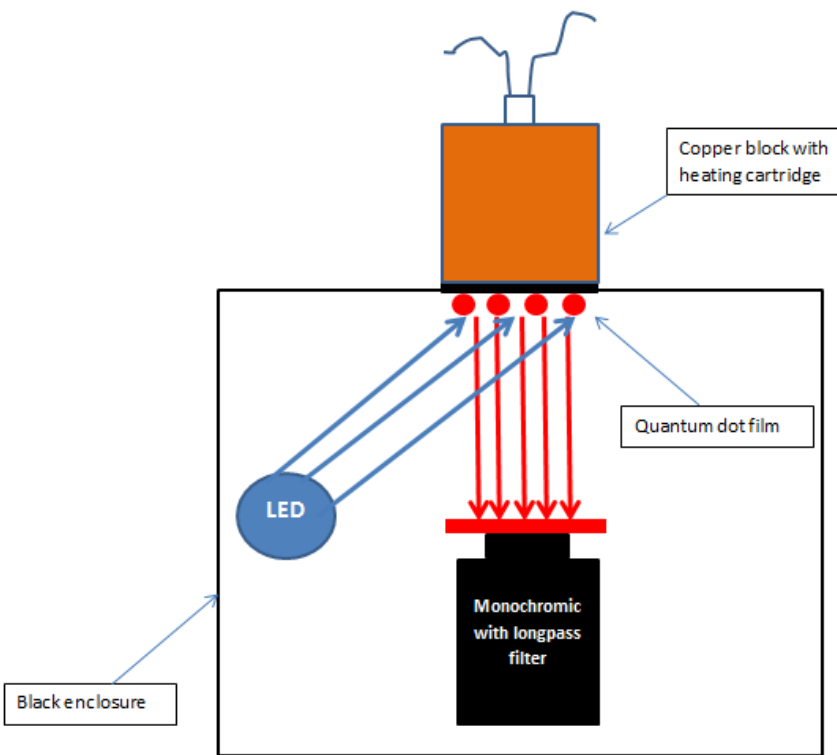

Effect of Quantum Dot Concentration and LED Intensity Variation

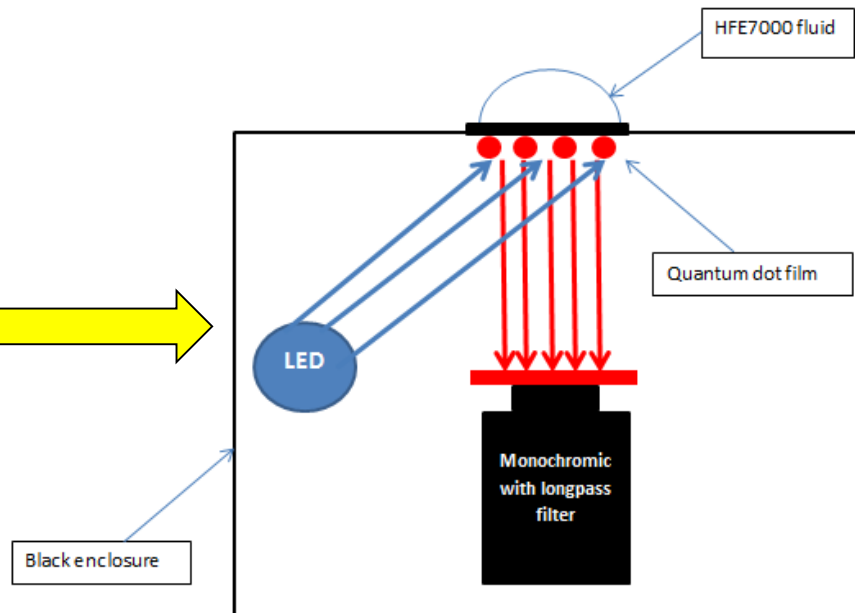

HFE7000 Demonstration Test Setup

Calibration

Droplet Testing

HFE7000 Surface Temperature Evolution

Summary

- Various parameters affecting quantum dots fluorescence were examined
 - Measurement steadiness
 - Sensitivity to temperature variation
- Usage of Quantum dots were examined in HFE7000 phase change applications
- A Novel technique for heat flux measurement in various heat transfer applications
